On Mar 2, 2000 this sequence version replaced gi:32759.
[2] also reports sequences for gamma-1, gamma-4, and a gamma pseudogene. Most of this sequence is 95% homologous with gamma-4. The hinge exons are only 70% homologous. The authors estimate that gamma-2 and gamma-4 are settled to the interpretation of the authors in important role in the evolution of human gamma genes. They also report the hinge regions of gamma-1, gamma-4, and a genes to be between 7.7 and 4.4 million years ago. This entry is part of a multigene region containing the gamma-2, gamma-4, and epslion-1, and alpha-2 genes. The relative locations of the four genes were determined by Flanagan and Rabbitts (Nature 300, 709-713

(1982)). They refer to this gene group as region B. The region A genes are gamma-1, pseudo-epsilon, alpha-1. Flanagan and Rabbits also determined the general locations of the two regions. They place region A between the JH/mu/dalta region and region B. Human fetal liver DNA, library of T. Maniatis [3] and Lawn et al [2], [1]; clones p-gamma-2RPA3 [2], 5A [3], and Ig-gamma-2-15 [1].

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                          [1] reports that the human C-gamma-4 gene is equally homologous to the mouse gamma-1, gamma-2a, and gamma-2b genes (about 75%). [3] galeo reports partial sequences for human gamma-2, gamma-3, and a gamma pseudogene. [2] presents the gamma-1, gamma-2, gamma-3, and pseudo-gamma hinge regions. This entry is part of a multigene region (region B), which includes the gamma-2, gamma-4, epsilon-1, and alpha-2 genes. See segment 1

Three fragments were used in the construction of pWDR1002, a 443 bp Not! I fragment were used in the construction of pWDR1002, a 443 bp Not! I HindIII fragment of pWDR1001 (see AAQ30905), the 7913 bp Not! I linearised pSAB122 (see AAQ30909). These fragments were ligated together and the ligation mixture was used to transform E. coli JA221(Iq) to ampicillin resistance. The insert encodes the immunoglobulin signal sequence, amino acids (AA) 1-122 of the humanised SAB heavy chain, is: the constant region (HV) and AA114-AA478 of the human 1gG4 heavy chain, is: the constant region (HC). The polypeptide encoded by this sequence is an antibody homolog which was shown to bind to CD4 but did not block the binding of gpl20 to CD4. CD4 is a cell surface glycoprotein of induced syncytia formation. This homolog can be used in the induced syncytia formation. This homolog can be used in the detection, prophylaxis and treatment of diseases caused by infective constant whose primary targets are CD4+ cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       7;
